As 2025 draws to a close, we wanted to provide you with an update on the progress of the Darlington Wind Farm and wish you a Happy Christmas and New Year.

Environment Effects Statement (EES):

- With the help of consultants, the project team is preparing the EES. and planning application. This year, we had multiple discussions and meetings with the TRG (Technical Reference Group) to make substantial progress on the application. The project team intends to lodge the EES application in 2026.
- After the EES is lodged, it will be publicly exhibited. This is a point of formal consultation in the EES process, allowing you to lodge a submission in response to the EES. An EES consultation plan outlining GPGA's approach to consultation during the EES process has been prepared and is available on both Darlington Wind Farm and DTP's websites.

Additional Surveys

- In accordance with the new “Handbook for the development of renewable energy in Victoria” released in May 2025, our consultants have undertaken broлга surveys each consecutive month from July to December 2025.
- As part of ongoing environmental studies, a drone survey was also conducted in November 2025 to assess Broлга habitat.

Community Benefits Framework:

- GPGA has prepared a draft framework to inform a Community Benefits Sharing program. Since then, through Community Information Sessions and targeted discussions, community members have provided helpful feedback on additional types of benefits they would like to see included. However, we also encourage you to share your thoughts if you haven't already done so. Please use the link/QR code at the end of this document.
